Hi,

According to this URL: <https://github.com/OpenVZ/opensvz-mirrors/blob/master/mirrors.masterlist>, mirror "mirror.nhanhoa.com" not updated since 02 Jan, but the state is still "Enabled", please disable it because it is outdated and always get error on it because cannot download the updated packages.

Ref:

mirror.nhanhoa.com still exists in this file: download.opensvz.org/kernel/mirrors-rhel6-2.6.32
