We tried rolling back to CentOS 6 for the container...

```
[root@hw001 cache]# prlctl create 101 --ostemplate centos-6-x86_64-minimal --vmtype ct
```

```
Creating the Virtuozzo Container...
```

```
Failed to register the CT: Operation failed. Unable to get appcache tarball name for  
f4cafb9-2102-4519-944e-a5facf772354.conf with ostemplate
```

We we installed CentOOS 6.7 on the server and had no problems.
