---

Hi everyone,

I wanted to restore a container running several websites, because I screwed something up. So I restored using vzrestore to a different container-id, but the folder I was looking for was missing.

How can that happen? Is there a chance to do an integrity-check of the backup?

Here is the command I'm using for backups

```
vzdump --snapshot --dumpdir /backup/vzdumps/ --compress --maxfiles 1 --tmpdir /vz/vztmp/  
--bwlimit 50000 1016
```

```
ii linux-image-openssl-amd64 042stab106.6  
ii vzctl 4.8-2  
ii vzdump 1.2.6-3  
ii vzquota 3.1-1  
ii vzstats 0.5.3-1
```

Thank you very much for your help.
