Hello

I have a HN with some CTs and need to do a nfs server in one of them. I have followed the wiki, all modules/settings are made however cannot start the nfs inside the CT.

On HN I have the nfs and nfsd modules loaded.

lsmod | grep nfs

```
pio_nfs          19011  0
ploop           118719 14 pio_kaio,pio_nfs,pio_direct,pfmt_raw,pfmt_ploop1
nfs             445290  6 pio_nfs,vzrst,vzcpt
fscache         55676  1 nfs
nfsd            313774  1
lockd           76070  3 vzrst,nfs,nfsd
nfs_acl         2655  2 nfs,nfsd
auth_rpcgss     46084  2 nfs,nfsd
sunrpc          271776 10 pio_nfs,nfs,nfsd,lockd,nfs_acl,auth_rpcgss
```

When I start the nfs service inside a CT I get, but as you can see the modules already laded in the HN.

Starting NFS daemon: rpc.nfsd: Unable to access /proc/fs/nfsd errno 2 (No such file or directory). Please try, as root, 'mount -t nfsd nfsd /proc/fs/nfsd' and then restart rpc.nfsd to correct the problem

The HN and CTs are running centos 6.7 (HN -64bit, CTs 32bit) with latest updates, with kernel Linux 2.6.32-042stab111.12.

Nor sure why the nfsd is not seen inside the CT, what should I check?

Thanks!
