Hi Folk,

I have created OpenVZ containers using Proxmox.

Is it possible to apply packet loss or delay on venet0 interface using NETEM (tc qdisc add)?

I tried using below command..

```
tc qdisc change dev venet0 root netem loss 0.1%
```

I am getting error ..

RTNETLINK answers: No such file or directory

Is that means, NETEM is not compatible with OpenVZ kernel?

Any help will be appreciated. Thanks in advance!!

with Regards, Kuldeep
