
Subject: Software raid from container, is it possible?

I am trying to evaluate openmediavault (OMV) and installed it as a container on openvz sefrver.

I have 4 additional drives on the host, which I passed through to OMV container with
vzctl set NNN --devices

I can see them from within the container mount, etc.

But when I tried to assemble the RAID from them with mdadm, I am getting errors.

Is it even possible / supported ?
