Subject: Internet in containers
Posted by Korben on Mon, 11 Apr 2016 08:28:41 GMT

Hello everybody!

I've installed Virtuozzo 7 on my bare metal server and migrated a couple of CTs using ovztransfer.sh from another HN with OpenVZ.

Now I can't share an internet connection with these CTs. I've done everything of this manual: https://openvz.org/Using_NAT_for_container_with_private_IPs but no luck.
How can I debug and find the reason why internet access isn't working?

Thanks.
