Hi, this is my first post and I don't know if this is the right section. My problem is that I've been trying to install OpenVZ in a fresh formated PC with Debian Jessie for several days but it seems to be impossible. When I run apt-get install linux-image-openvz-amd64 the system can't find that package. How can I solve this?? I've looking for all the web but not lucky. Hope you can help me. Thanks in advance. BR.
