
Subject: Undelete files in openvz container

Before around 2.5 hours ago I deleted a very important directory on my openVZ vps.

I have tried:

```
root@server:/home extundelete /dev/simfs --restore-directory ./ --output-dir /home/restore/
```

Output:

```
extundelete: failed to read-only open device "/dev/simfs": Error code 1
```

How can I solve this issue?
