Subject: Re: CentOS 7.x and OpenVZ
Posted by krazybob on Wed, 03 Aug 2016 11:34:15 GMT

I think this is great news. But my vendor may not be willing to do this. I have KVM over IP -- can a base install of CentOS be loaded to make the machine bootable and then OpenVZ installed and rebooted? Or does one need actual console to do this? I don't see this discussed in the tutorial - which is great by the way!
