[quote title=krazybob wrote on Fri, 19 August 2016 14:32]Did you have to install the server as EXT4 file system? As I recall that was a major issue. Doing it this way goes against the staff of OpenVZ that want it installed from their ISO. Are you missing any features? vzbackup?

I install server on ext4fs, no lvm

i use simfs, no ploop image, so i missing live migration, snapshot backup etc....
