Hello

I saw that later, down the line there is an SCP command, but since I used -p2222 in the SSH_OPTS, in SCP there should be -P2222.. so I just changed new node ssh port to 22 temporary...

now I see similar error: 405554 Terminated
-f /dev/null > \$tmpdir/tmp/lock" > /dev/null 2

vzctl exec \$veid "mount -o bind / \$tmpdir; tail

but transfer does not stop and it finishes and containers work after starting them!

thank you
