Hi,

I can't install latest Openvz 6 kernel on our Supermicro servers. Servers are located in remote hosting, so I can't provide too much information. What I see, that kernel fails to load. This is our server:

CPU

Intel(R) Xeon(R) CPU E5-1620 v2 @ 3.70GHz

Cores : 8

Cache : 10240KB

RAM

4x 16384MB

Disks

2 x 2000 GB

Motherboard

X9SRE/X9SRE-3F/X9SRi/X9SRi-3F

Please help!
