Subject: OVZ 7 at CentOS 7?
Posted by andre on Tue, 04 Oct 2016 23:15:59 GMT

Is it possible to Install OVZ 7 at a CentOS 7 installation?

We are trying to use the OVZ 7 installer with 4 disks at RAID10 (for /vz) but it gets stuck at "Setting up de installation environment".

So, I was wondering, if we have a CentOS 7 install, wouldn't it be possible to have OVZ 7 installed at it? As it used to work with CentOs 6?

At ov7 installer, Isn't there an "advanced way" that would allow us to use the RAID device that was previously created at the shell prompt? (ex: just choosing md1->/boot, md5->/ etc).

Thanks
