Hi,

I am trying to migrate a ve to a different physical host.

This is what happens:

```
Quote:m00host:/etc/vz/conf# vzmigrate --online x.y.z.233 998
```

```
OPT:--online
```

```
OPT:x.y.z.233
```

```
Starting online migration of VPS 998 on x.y.z.233
```

```
Preparing remote node
```

```
Initializing remote quota
```

```
Syncing private
```

```
awk: not an option: --assign
```

```
Failed to sync VPS private areas
```

Let's do it a bit more verbose:

```
Quote:m00host:/etc/vz/conf# vzmigrate -v --online x.y.z.233 998
```

```
OPT:-v
```

```
OPT:--online
```

```
OPT:x.y.z.233
```

```
Starting online migration of VPS 998 on x.y.z.233
```

```
  Loading /etc/vz/vz.conf and /etc/vz/conf/998.conf files
```

```
  Check IPs on destination node: x.y.z.229
```

```
Preparing remote node
```

```
  Copying config file
```

```
998.conf                100% 1151    1.1KB/s  00:00
```

```
  Creating remote VPS root dir
```

```
  Creating remote VPS private dir
```

```
Initializing remote quota
```

```
  Quota init
```

```
  Turning remote quota on
```

```
Syncing private
```

```
awk: not an option: --assign
```

```
Failed to sync VPS private areas
```

I'm using Debian and Version 3.0.11 of vzctl package:

```
Quote:m00host:/etc/vz/conf# apt-cache policy vzctl
```

```
vzctl:
```

```
  Installiert:3.0.11-1dso1
```

```
  Mögliche Pakete:3.0.11-1dso1
```

```
  Versions-Tabelle:
```

```
*** 3.0.11-1dso1 0
```

```
   500 http://debian.sysys.org stable/openvz Packages
```

```
   100 /var/lib/dpkg/status
```

Any ideas?
