Short version:

displaying /proc/modules content inside containers isn't enough to enable CUDA applications, '/proc/devices' and '/proc/driver/nvidia/parms' will also be required, '/sys/devices/cpu/online' is being checked but isn't fatal and may need adjustments for resource management.

Longer version on JIRA:

I don't know if you wanted me to take the discussion and follow-up to JIRA...

So after you didn't react to my last post with the extra logs I signed up for JIRA and posted inside and outside logs for comparison and additional fixes.

Thanks you for your efforts!
