Subject: VZ7 Win 2008 , 2012 VM paused
Posted by nshost on Wed, 07 Dec 2016 00:17:54 GMT

Hello,

Seems we can't install Win server 2008 or 2012 , the VM is stopping on boot.

```
UUID                          STATUS    IP_ADDR      T NAME
{014b496d-2c02-42ee-a555-112e6ae1e4fc}  paused      -           VM Windows2012
[root@shared-2-3 vz]# prlctl resume Windows2012
Resuming the VM...
```
Failed to resume the VM: Operation failed. Failed to execute the operation. (Details: internal error: unable to execute QEMU command 'cont': Resetting the Virtual Machine is required)

We need some help is someone encounter this err.

Thanks.
