Quote:it is very unusual requirement

Just my luck, living on the edge. Some days I hate being a geek...

Quote:Can you strace your pppd please, probably it's just a lack of capability:
strace -o out -ff /usr/sbin/pppd

also try giving VE all the capabilities (check vzctl man to find out how to setup capabilities and which caps exist). Most likely you need NET_ADMIN

Yep, that's most likely it. I've managed to get PPP up and running on the Linux-Vserver I'm also assessing by setting /etc/vservers/<FOO>/bcapabilities to:

CAP_SYS_TTY_CONFIG
CAP_NET_ADMIN
CAP_NET_RAW
CAP_SYS_ADMIN

I'll try seeting VZ to the same once I get my paws on the box again, they're trying to install an app to see if it suits...

Regards,
    Eugéne
