Tried the same:

```
# mv /etc/modprobe.d/vz.conf /etc/modprobe.d/vz.conf.DISABLED
```

```
# cat /etc/modprobe.d/vz.conf.DISABLED
```

```
options vzevent reboot_event=1
```

```
#options nf_conntrack ip_conntrack_disable_ve0=0
```

```
options nf_conntrack ip_conntrack_disable_ve0=1
```

reboot

```
# cat /sys/module/nf_conntrack/parameters/ip_conntrack_disable_ve0
```

```
0
```

So in case you face again that omitting `ip_conntrack_disable_ve0=0` makes your node to disable conntracks, please let us know.
