Subject: Converting OpenVZ to `KVM not working anymore
Posted by Yzord on Mon, 26 Dec 2016 15:42:25 GMT

Normally when i want to convert an OpenVZ container into a KVM one i use the install mingetty on the host and send all data to the new host.

But this is not working anymore with CentOS 7, cause there is no mingetty for CentOS7/Rhel7 anymore.

Is there an other way to convert an OpenVZ container into a KVM one?
