Actually there is beta support for user namespace in CentOS 7

 https://github.com/procszoo/procszoo/wiki/How-to-enable-%22u
ser%22-namespace-in-RHEL7-and-CentOS7%3F

Although it does need shadow-utils >= 4.2.1 whereas CentOS 7 has 4.1.5.1

This is needed to get a dedicated UID/GID range for a container.
