Subject: Exclude paths from vldump with ploop container

I'm using vldump to backup my containers, and it seems to work fine (except for when using --suspend I get a tar warning to do with rmdir), but when I try to use the --exclude-path option, and giving it a path, or a path ending with .+, the whole volume it backed up.

Is there any way to use this option with a ploop container?

I'm running on Ubuntu 14.05.5 LTS
