Yeah the problem is:

```
# modprobe ipt_owner/xt_owner
```

```
modprobe: FATAL: Module ipt_owner/xt_owner not found.
```

This module just doesn't exist on Virtuozzo Linux 7.

I just noticed this tonight as well which is some what of a shock. I would be interested to hear why this module is missing?

CSF Firewall requires it:

Testing ipt_owner/xt_owner...FAILED [Error: iptables: Invalid argument. Run `dmesg' for more information.] - Required for SMTP_BLOCK and UID/GID blocking features
