I am new to this. I have tried reading the online manual and find it very brief. It my hope that someone help me understand. I use to use virtuozzo but it too expensive now. I need create containers like virtuozzo but manual not very clear on step by step. I downloaded a legacy Centos 7 minimal but I don't know what version it is. I want install Plesky. How I install template so I make containers from it? Can you tell me who one and then do two and then three and like that?
