---

Hey there,  
because of Backup-Speed we do Ploop Level Backups of our Containers (as described here:  
<https://openvz.org/Ploop/Backup>)  
But what would be the right procedure to restore such Backups when needed? (we got the  
"root.hdd" Directory + ve.conf)  
Maybe someone here can help me on that?  
thx  
Andreas Schnederle-Wagner
