ifcfg- files works for me. don't forget to kill NetworkManager and ModemManager: yum erase NetworkManager work perfect for me. What &^&87(*^ is that on server OS

I did em1 and em2 ... into bond:

cat <<EOT > /etc/sysconfig/network-scripts/ifcfg-em1

DEVICE=em1

ONBOOT=ves

IPV6INIT=no

MASTER=bond0

SLAVE=yes

EOT

cat <<EOT > /etc/sysconfig/network-scripts/ifcfg-em2

DEVICE=em2

ONBOOT=yes

IPV6INIT=no

MASTER=bond0

SLAVE=yes

EOT

cat <<EOT > /etc/sysconfig/network-scripts/ifcfg-em3

DEVICE=em3

ONBOOT=ves

IPV6INIT=no

MASTER=bond0

SLAVE=yes

EOT

cat <<EOT > /etc/sysconfig/network-scripts/ifcfg-em4

DEVICE=em4

ONBOOT=yes

IPV6INIT=no

MASTER=bond0

SLAVE=ves

EOT

cat <<EOT > /etc/sysconfig/network-scripts/ifcfg-bond0

DEVICE=bond0

ONBOOT=YES

BONDING OPTS="milmon=100 mode=1"

IPV6INIT=no

EOT

Installer with Manager will try to put all your interfaces into bridges. Make sure to go and remove them from there Spend 30minutes figuring out why IP on the bond0 was not working, till figure out it was in a bridge
