mangust wrote on Sat, 02 September 2017 21:56 Just copy files (with permissions) tar, scp, untar:  
/vz/private/<VEID>  
/etc/vz/conf/<VEID>.conf

create /vz/root/<VEID> on the destination

Migrated

No, this is wrong. You described a migration between two OpenVZ 6 Nodes.

From 6 to 7 you have to use ovztransfer. This works only in the direction 6 to 7.

Here you can find the script: ovztransfer
