Hi,

some backdoor tcp port 64000 keep opening on all interfaces.  
if I stop prl-disp.service, it gone. but prlsrvctl command that configure network according to manual will not work. so need to be up then needed and then can be disabled.  
Can 64000 port be used to attack servers?

Another issue that I can't find a way to close it on the firewall. It keep open itself.
