Hello, i have big problem with network.

I got dedicted server with two ip address.

I made openVZ with debian 9.0 template.

I have big problem, my openvZ cant join into internet. ping dont responde.

What should i do? I tried to disable venet and instead of it enable veth but my openVZ dont want to get up because it dont see any interface.

I tried to do everything what is here : [https://openvz.org/Virtual\\_Ethernet\\_device](https://openvz.org/Virtual_Ethernet_device) but on step :  
Configure device in CT i have problem.

My openVZ dont see interface eth0 although i did it `zctl set 101 --netif_add eth0, MAC:ADDRESS`  
`--save`

Can icount for any help? Thank you!
