I don't have more info to provide here unfortunately. I did migrate all vm's off the server as a resolution to a system with out issues. It doesn't appear to be hardware relate - all tests pass. I may test further with a BIOS upgrade in the future. All software really matched the other openvz7 servers.

This is surprisingly the same behavior in <https://forum.openvz.org/index.php?t=tree&th=13348&start=0> which was fixed in a kernel update - except it occurred with in 15 minutes of bootup.
