Subject: Re: 3.10.0-693.11.6.vz7.40.4 Out of memory on one Server
Posted by wishd on Fri, 12 Jan 2018 17:06:56 GMT

I may not have been clear. The entire server was crashing similar to what 'ikbenut' said not a single vm only. I saw the same vm's running, but could not enter with mounts active. Had to do a a full restart. The common error seems to be 'SLUB: Unable to allocate memory on node -1'. There was plenty of free memory as well, on boot also no swap space was used in any way before it locked up again.
