When creating a new CentOS Container.

```
prctl create name --vmtypes ct --ostemplate centos-7-x86_64
```

Cannot find a valid baseurl for repo: base0

Could not retrieve mirrorlist <http://vzdownload.swsoft.com/download/mirrors/centos-7> error was 14: curl#6 - "Could not resolve host: vzdownload.swsoft.com"

Error: /usr/share/vzyum/bin/yum failed, exitcode=1

Creation of Container private area failed

Update: Problem Solved, external issue and not related to a fresh installation!
