Directory for containers private areas is /var/lib/vz/private/

so I try:

```
awk "BEGIN {print $(stat -f -c '%a*%s/1024' /var/lib/vz/private/)}"
```

and this is the result

2.62468e+09

so how I understand this is the result which the script can't handle?

the command

```
stat -f -c '%a*%s/1024' /var/lib/vz/private/
```

results in 656168065*4096/1024
