Hey!

Thanks for your quick reply!

Results netstat monitoring:

```
tcp    0    0 server1.xx:64000 server2.xx:51998 ESTABLISHED
```

Solution:

Open port 64000

For example: `tcp|in|d=64000|s=IP`

--

Maybe useful to add the port-info to the guide?

It works now! Thanks for referring to the firewall.
