"I have one machine with the following error:

May 23 21:33:26 ovz7 kernel: BUG: unable to handle kernel paging request at 00000000ffffffec

Please check /var/crash directory, it should contain subdirectory with vmcore and vmcore-dmesg.txt files.

you you do not have such subdirectory -- please enable kdump service.

Then please submit bug into bugs.openvz.org
