Hello,

i was running an update on a server (yum update) with a Centos 6.7 OS.

and i got this error bello and the update didn't continue:

I run a couple of VPS machines on this server, OpenVZ virtualization.

can anyone tell me what to do in order to update the kernel?

Thanks.

You could try using --skip-broken to work around the problem
You could try running: rpm -Va --nofiles --nodigest
```
