Dear George,  
unlike from OpenVz6, OpenVz7 uses the same packages as Virtuozzo 7,  
updates of stable branch in OpenVz7 are synchronised with Virtuozzo 7 updates,  
so for OpenVz7 you can use regular Virtuozzo Advisories:

Virtuozzo Advisory Archive

<https://help.virtuozzo.com/customer/portal/articles/2725323>

VZA-2018-037, Important product update: Virtuozzo 7.0 Update 7 Hotfix 3 (7.0.7-461)

<https://help.virtuozzo.com/customer/portal/articles/2941807>

(it was released yesterday in Vz7 and it should be published in Openvz today-tomorrow)

VZA-2018-023, Kernel update: new kernel 3.10.0-693.21.1.vz7.46.7, Virtuozzo 7.0 Update 7  
Hotfix 2 (7.0.7-453)

<https://help.virtuozzo.com/customer/portal/articles/2936834>

VZA-2018-021, Product update: Virtuozzo 7.0 Update 7 Hotfix 1 (7.0.7-445)

<https://help.virtuozzo.com/customer/portal/articles/2934092>

Thank you,

Vasily Averin
