Dear fvafva,

Our kernels are based on last released RHEL6 kernels.

We are monitoring public security mailing lists,
timely detect issues critical for containers,
and timely release fixed kernels.

Take a look:

openVZ6 kernel 042stab128.2 was released 26 March 2018 it is based on RHEL6 kernel
2.6.32-696.23.1.el6 released 13 March 2018.

Our next kernel 042stab129.1 was released 15 May 2018 and it is based on RHEL6 kernel
2.6.32-696.28.1.el6 released 8 May 2018.

Our last kernel 042stab130.1 was released 23 May 2018 and it is based on last RHEL6
2.6.32-696.30.1.el6 released 21 May 2018.

Moreover our kernels includes many security fixes not included yet into RHEL kernels.

I do not know what is Nessus and how it works,
however anyway from security point of view our last released kernels at least are not worse than
last released RHEL kernels.

Thank you,
Vasily Averin
