vaverin wrote on Thu, 04 October 2018 11:20Dear Mohamad,
please use jira for reporteing about noticed issues.

I've submitted
https://bugs.openvz.org/browse/OVZ-7063

Quote:"I am trying to install OpenVZ on a RedHat 7.5 machine (AWS instance). I have successfully installed it and its utilities (with yum mainly, openvz-release-7.0.8-4.vz7.x86_64) and I am able to start a container, suspend, and resume it. The container launched is Centos 7."
OpenVZ 7 on CentOS 7 or Red Hat 7 is not supported?

@Mohamed, Please use one of the official installation methods. Replacing the 7.5 kernel is not supported.
ISO: https://download.openvz.org/virtuozzo/releases/7.0/x86_64/is o/

Please check: https://blogs.oracle.com/ravello/install-iso-image-aws-googl e-cloud for AWS.
