Subject: vzkernel-3.10.0-x releases stopped since Sept?
Posted by wsap on Fri, 30 Nov 2018 19:22:23 GMT

Hey OpenVZ devs... where are the security patched kernels for OpenVZ 7?

We get regular email alerts about security patches to both OpenVZ 6 and 7, yet only the OpenVZ 6 kernels have been released in the repos since September, despite multiple patches having been developed for the OpenVZ 7 kernel.

It's one thing to block the open source community's access to the ReadyKernel patches (even though many of us would surely pay for a KernelCare-like licensing structure for this feature), but a whole other, much more serious, thing to not even release security-patched kernel versions...

What's going on here?

And while we're on the topic, shouldn't these OpenVZ 7 kernel updates that never actually get compiled and released to the repos be set up with an RSS feed on openvz.org like the OpenVZ 6 kernel updates are?
