Hello! (Please forgive my bad English)

Quote:Q1) Is it possible to set some mount options (e.g. noexec, nosuid, nodev) for the added HDD during container startup ?

Q2) Is it possible to enable secondary level user quota for the added HDD (i.e. enable jqquota for that partition) ?

Dunno... I only use bind mounts :

Ex (in CTID.conf) : BINDMOUNT="/mnt/external-HDD /home"

Quote:Q3) It seems pcompact cannot compact CT additional disk.

AFAIK, you can only "compact" VZ containers (ploop), not an external SSD/filesystem.

Have a great day!
