mangelot wrote on Tue, 23 April 2019 10:29and how about the older openvz?

[root@day sys]# cat ./kernel/mm/transparent_hugepage/enabled
always madvise [never]
[root@day sys]# uname -a
Linux <hostname> 2.6.32-042stab134.8 #1 SMP Fri Dec 7 17:16:09 MSK 2018 x86_64 x86_64
x86_64 GNU/Linux

So, the things remain the same.
AFAIK, you can enable them and node should not crash instantly after that.
But as it's not a default configuration, it's not that widely tested by number of installations.

If i were you and i need hugepages for some reason, i'd upgrade to OpenVZ 7 -
you've got a good reason now.
