Subject: Re: OpenVZ 7 + mdadm slow rebuild
Posted by ccto on Thu, 30 May 2019 11:04:53 GMT

Sorry, the problem shall be resolved.

It was caused by ext4lazyinit.
https://www.thomas-krenn.com/en/wiki/Ext4_Filesystem

If I use -
mkfs.ext4 -E lazy_itable_init=0,lazy_journal_init=0 /dev/xxx/yyy
Then wait for mkfs.ext4 some time (a few minutes).
Not sure why ext4lazyinit runs over a hour, but still running...

Then, the mdadm rebuild performance looks normal even the /vz filesystem is mounted.
