Subject: Re: Is ploop stable/Any progress on quotas for simfs
Posted by ccto on Wed, 23 Oct 2019 12:19:19 GMT

We have servers running with both OpenVZ 6, OpenVZ 7. Gradually migrating to OpenVZ 7 platform

We use ploop, snapshot (for backup), compact. ploop is OK.
We do not receive report about loss of files.

simfs inside OpenVZ 7 does not support 2nd level quota.
If guest is CentOS 5, ploop does not support 2nd level quota too in OpenVZ 7 host.
