I've done a lot of testing with lxc and lxd, and while it has made a lot of progress, for my use cases openvz is the best available platform.

I've had strange issues over the years with lxc containers, and as a result, they've all been moved to openvz 7, with no further issues.

Originally I used only the containers in openvz, but now am using the VMs more and more, when I need a full OS install.

YMMV, of course. To each his own, and it's great that the open source community offers choice.

Jake
