
Subject: Trouble using iptables with Centos 8

[View Forum Message](#) <> [Reply to Message](#)

Hi, I installed iptables-services with dnf in a default Centos 8 container.

But when trying to start the service:

```
CT-1011 /# service iptables start
Redirecting to /bin/systemctl start iptables.service
Job for iptables.service failed because the control process exited with error code.
See "systemctl status iptables.service" and "journalctl -xe" for details.
```

```
CT-1011 /# service iptables status
Redirecting to /bin/systemctl status iptables.service
```

```
Loaded: loaded (/usr/lib/systemd/system/iptables.service; enabled; vendor preset: disabled)
Active: failed (Result: exit-code) since Fri 2020-07-24 13:25:39 CEST; 35s ago
Process: 103 ExecStart=/usr/libexec/iptables/iptables.init start (code=exited, status=1/FAILURE)
Main PID: 103 (code=exited, status=1/FAILURE)
```

```
Jul 24 13:25:39 localhost.localdomain systemd[1]: Starting IPv4 firewall with iptables...
Jul 24 13:25:39 localhost.localdomain iptables.init[103]: iptables: Applying firewall rules:
iptables-restore v1.8.4 (nf_tables):
Jul 24 13:25:39 localhost.localdomain iptables.init[103]: line 3: CHAIN_UPDATE failed (No such
file or directory): chain INPUT
Jul 24 13:25:39 localhost.localdomain iptables.init[103]: line 4: CHAIN_UPDATE failed (No such
file or directory): chain FORWARD
Jul 24 13:25:39 localhost.localdomain iptables.init[103]: line 5: CHAIN_UPDATE failed (No such
file or directory): chain OUTPUT
Jul 24 13:25:39 localhost.localdomain iptables.init[103]: [FAILED]
Jul 24 13:25:39 localhost.localdomain systemd[1]: iptables.service: Main process exited,
code=exited, status=1/FAILURE
Jul 24 13:25:39 localhost.localdomain systemd[1]: iptables.service: Failed with result 'exit-code'.
Jul 24 13:25:39 localhost.localdomain systemd[1]: Failed to start IPv4 firewall with iptables.
```

It can also be reproduced with:

```
CT-1011 /# iptables-restore /etc/sysconfig/iptables
iptables-restore v1.8.4 (nf_tables):
line 3: CHAIN_UPDATE failed (No such file or directory): chain INPUT
line 4: CHAIN_UPDATE failed (No such file or directory): chain FORWARD
line 5: CHAIN_UPDATE failed (No such file or directory): chain OUTPUT
```

```
CT-1011 /# cat /etc/sysconfig/iptables

```

I have verified that this works in a Centos 8 VM (not container).
