Subject: Re: BUG? OVZ 7 + CentOS 8 + iptables v1.8.4 (nf_tables)
Posted by HHawk on Wed, 02 Dec 2020 13:14:30 GMT

I am experiencing the same issue when setting up a new CT with CentOS 8.x along with DirectAdmin (CSF/LFD).
Exactly the same issues as mentioned by the topic starter.

Since this is already some time ago, I would assume it was fixed already, but apparently not?

When is this being fixed or even looked at?
...or is there a workaround?
