I dont know if this option is supported in VZ7, maybe one of the official members can reply, in the meantime i can offer you a workaround, that is to first create rc.local for your system, set ONBOOT="no" for every guest in vz.conf of every guest and then perhaps just make them start one by one in etc/rc.d/rc.local by putting

```
/usr/sbin/vzctl start 100
```

```
/usr/sbin/vzctl start 101
```

```
/usr/sbin/vzctl start 98
```

or something

Of course maybe there is official way to honour priority so perhaps anyone else can reply..
