Subject: Multicast in OVZ CTs and VMs?

---

I've been doing some testing with ucarp, in debian VMs and containers.

(ucarp is an implementation of VRRP, a means of providing a highly available floating virtual IP within a cluster of machines)

It works fine on proxmox VMs and CTs, and I would rather run it on openvz, but so far my attempts to get it fully up and running have failed.

Basically, both nodes become master, because neither node is seeing the multicast traffic from the other.

What is the secret of allowing multicast traffic to pass from openvz VMs and CTs, onto the lan?

Jake
