Hey folks

So we're looking at some new hardware, but it uses Mellanox networking hardware. We tried to set up with it, but found that OpenVZ didn't have the drivers for it installed. There's CentOS7 drivers out there for it, but they won't install using the provided scripts because it detects it's not a CentOS system.

Reference for drivers:

https://network.nvidia.com/products/ethernet-drivers/linux/mlnx_en/

Thanks so much!

Allen
